

Steer Point Quarry Restoration Report – March 2020

We have temporarily suspended normal operations at Steer Point following the shutdown of many construction sites and a general economic slowdown. This will continue unless we get a significant request for bringing loads to justify reopening when we will be asking for a risk assessment from the haulier over and above normal procedure to assess their attitude to minimising the spread of covid19 if they do request coming to Steer Point. There may still be some operational vehicle movements accessing the site for periodic inspections to ensure the site is safe and secure.

We are talking with Devon CC with regard to impact on the restoration program that this shut down may have and I will keep you informed.
